

IRON & SULPHUR SOLUTIONS

NO MORE PROBLEM WATER

Eliminate rust staining, as well as sulphur "rotten egg" odours with the Iron Pro Air Injection System.

Iron and Sulphur are two of the most common elements found in nature, while both are extremely important for every day life, both are a nuisance in water and can cost you money and frustration.

Iron staining is a common problem in homes today. Iron staining on fixtures, as well as dingy clothes and sometimes even hair will turn a reddish orange color.

Iron bacteria may be present in water with iron, creating a slimy build up in standing water (such as your toilet tank) and can smell like rotting vegetation.

Sulfur is easily detected by the presence of a "rotten egg" odour, and is sometimes associated with yellow staining.

All of these problems can be eliminated with the Iron Pro Air Injection System.

IRON PRO SERIES

WATER STORE - IRON AND SULPHUR FILTERS

Iron and Sulphur Removal System Protects your appliances.

By reducing the iron and sulphur buildup in your water your appliances will last longer. Rust and slime buildup make your appliances work harder and less efficiently, requiring more maintenance or replacement.

Using Nature's Own Process

These naturally occurring elements can be removed using nature's own process of oxidation.

The Iron Pro maintains an "air pocket" in the top of the tank while the system is in service. As water passes through the air pocket, iron and sulphur are oxidized. The Iron Pro filter media bed then removes the oxidized iron and sulphur from the water. Additionally, dissolved oxygen is added to the water.

Efficient and Chemical Free

The Iron Pro Injection Filter System, as a single tank system, is an efficient and cost effective system. The need for additional equipment... air tanks, feed pumps, or harsh chemicals (like those used in Manganese Greensand Systems) is virtually eliminated!

Proven Technology

The Iron Pro system includes the Fleck 2510AIO SXT electronic control valve that automatically backwashes the system to clean the media and flush everything down the drain. By utilizing a patented piston in the control valve, the Iron Pro is able to put the whole oxidation process inside one tank, keeping maintenance costs and down time to a minimum.

Made by Fleck, a leading manufacturer of control valves in the US, the digital control valve allows for ease of setup and automatic operation.

The Iron Pro can remove up to 8 ppm Hydrogen Sulfide and up to 7 ppm Iron. A daily backwash will remove accumulated iron and replenish the filter media bed. The regeneration process also adds a fresh air pocket to the system.
